REMARKS

Reconsideration of the application in view of the present amendment is respectfully requested.

Claim 33-36 are canceled. New claims 39-42 are added. Accordingly, claims 1-36 are canceled, and claims 37-42 are pending.

Claims 37 and 38 are objected to for reason stated in the Office Action. Claims 37 and 38 are amended to overcome the objections.

Claim 39 recites a self-service terminal comprising a port for outputting transaction details to a user, means for determining if the user has previously requested to receive a current stock price of a company when receiving transaction details, means for accessing a current stock price of the company from a repository providing stock prices of companies, means for appending the current stock price obtained to transaction details, and means for delivering the transaction details and the appended current stock price to the user via the port, so that the user automatically receives a current stock price of the company if the user has previously requested such a service.

None of the prior art including the prior art references of record discloses or suggests a self-service terminal comprising a port for outputting transaction details to a user, means for determining if the user has previously requested to receive a current stock price of a company when receiving transaction details, means for accessing a current stock price of the company from a repository providing stock prices of companies, means for appending the current stock price obtained to transaction details, and means for delivering the transaction details and the appended current stock price to the user via the port, so that the user automatically receives a current stock price of the company if the user has previously requested such a service. Thus, claim 39 patentably defines over the prior art including the prior art references of record, whether taken singularly or in combination, and is therefore allowable.

Claim 40 recites a method of operating a self-service terminal. The method comprises determining if a user has previously requested to receive a current stock price of a company when receiving self-service transaction details, accessing a current stock price of the company from a repository providing stock prices of companies, appending the current stock price obtained to self-service transaction details, and delivering the self-service

09/871,928

transaction details and the appended current stock price to the user so that the user automatically receives a current stock price of the company if the user has previously requested such a service.

None of the prior art including the prior art references of record discloses or suggests a method of operating a self-service terminal, wherein the method comprises determining if a user has previously requested to receive a current stock price of a company when receiving self-service transaction details, accessing a current stock price of the company from a repository providing stock prices of companies, appending the current stock price obtained to self-service transaction details, and delivering the self-service transaction details and the appended current stock price to the user so that the user automatically receives a current stock price of the company if the user has previously requested such a service. Thus, claim 40 patentably defines over the prior art including the prior art references of record, whether taken singularly or in combination, and is therefore allowable.

Claim 41 recites a self-service terminal comprising a port for outputting transaction details to a user, means for determining if the user has previously requested to receive a current exchange rate between two currencies when receiving transaction details, means for accessing a current exchange rate between the two currencies from a repository providing exchange rates, means for appending the current exchange rate obtained to transaction details, and means for delivering the transaction details and the appended current exchange rate to the user via the port, so that the user automatically receives a current exchange rate between the two currencies if the user has previously requested such a service.

None of the prior art including the prior art references of record discloses or suggests a self-service terminal comprising a port for outputting transaction details to a user, means for determining if the user has previously requested to receive a current exchange rate between two currencies when receiving transaction details, means for accessing a current exchange rate between the two currencies from a repository providing exchange rates, means for appending the current exchange rate obtained to transaction details, and means for delivering the transaction details and the appended current exchange rate to the user via the port, so that the user automatically receives a current exchange rate between the two currencies if the user has previously requested such a service. Thus, claim 41 patentably defines over the prior art

09/871,928

including the prior art references of record, whether taken singularly or in combination, and is therefore allowable.

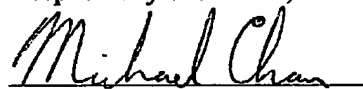

Claim 42 recites a method of operating a self-service terminal. The method comprises determining if a user has previously requested to receive a current exchange rate between two currencies when receiving self-service transaction details, accessing a current exchange rate between the two currencies from a repository providing exchange rates, appending the current exchange rate obtained to self-service transaction details, and delivering the self-service transaction details and the appended current exchange rate to the user so that the user automatically receives a current exchange rate between the two currencies if the user has previously requested such a service.

None of the prior art including the prior art references of record discloses or suggests a method of operating a self-service terminal, wherein the method comprises determining if a user has previously requested to receive a current exchange rate between two currencies when receiving self-service transaction details, accessing a current exchange rate between the two currencies from a repository providing exchange rates, appending the current exchange rate obtained to self-service transaction details, and delivering the self-service transaction details and the appended current exchange rate to the user so that the user automatically receives a current exchange rate between the two currencies if the user has previously requested such a service. Thus, claim 42 patentably defines over the prior art including the prior art references of record, whether taken singularly or in combination, and is therefore allowable.

Allowance of claims 37 and 38 is hereby acknowledged.

In view of the foregoing, it is submitted that the application is in condition for allowance, and allowance of the application is respectfully requested.

Respectfully submitted,

Michael Chan
